More Late Blight in Ohio
Sally Miller

Late blight has now been confirmed in tomatoes from Geauga county and potatoes from Wayne county. An additional home garden sample from Holmes county was also confirmed positive for late blight. The Geauga county samples came from a planting of 1200 fresh market tomato plants, which became a total loss less than two weeks after symptoms first appeared. The field has now been plowed under. The potato late blight was found in a small area in a research plot in Wooster (not previously inoculated). The weather continues to be favorable for late blight, so precautions outlined last week should be followed until harvest is complete. Please send samples for confirmation to: Dr. Sally Miller, Dept. Plant Pathology, OSU/OARDC, Wooster, OH 44691.

TOMCAST and BLITECAST Update
DSV Hotline 800-228-2905
Jim Jasinski
